INSTRUCTIONS TO EXPORTERS

This pamphlet is designed primarily to aid exporters in making proper entries on the Shipper's Export Declaration of articles which are exported from the United States. The Shipper's Export Declaration is the original source of all United States export statistics, and the accuracy of the export statistics, therefore, is dependent, in a very large measure, on the proper description of the goods in the declaration. The export declarations from all parts of the country are sent to the division of customs statistics at New York, and there the information contained in the declaration is consolidated into what finally becomes the export statistics.

There are between 30 and 40 export classes, in which are included all items of farm equipment. There are many hundreds of such items, and all of these must finally be shown in the export statistics in one of the 30 or 40 classes. It is, therefore, a matter of great importance that the goods shipped should be properly described in the export declaration, and, above all, that the class number should be shown. A reference to the list on page 5 will show at a glance under what class any given article falls and the number which has been applied to that class.

It is desirable that, wherever possible, the description shown in the commodity column on the export declaration should conform to the description given for that class in the export classification. In most cases, however, that is impracticable, but a description should be used sufficiently clear to indicate to a person not versed in technical terms what type of equipment is being shipped and in what class it should properly fall. Where the class number is shown, as should always be the case, this serves as a guide to the coding clerk, but it is not final, as the final judge as to whether or not an article falls into a given class is the division of customs statistics. Instructions which were sent to the collectors of customs and others concerned by the Secretary of Commerce on October 22, 1930, apply just as well to exporters and shippers, and the following excerpts from these instructions are, therefore, given here:

The kinds, quantities, and values of articles exported shall be compiled from the export declaration furnished by the shipper to the collector of customs at the port of exportation, prepared on the official form—Customs Form No. 7525—in accordance with the instructions of T. D. 38410. (Arts. 159, 1133, 1158, 1160, and 1161, Customs Regulations.)

Collectors will require that the kinds and quantities of exported articles be shown in the Shipper's Export Declaration, in accordance with the classification of Schedule B. If on examination any declarations are found to be inaccurate or incomplete in the description of articles, quantities, or values, or insertion of the intermediate country instead of the country of final destination, or containing any error apparent on the face of the declaration, the correction thereof will be required before the declaration is accepted. (Arts. 160, 1141, Customs Regulations.)

Value of exports.—The values stated should be the actual cost or selling price, if the goods are sold, including the cost of cases and other containers and actual or estimated inland freight charges from the interior place of shipment to the seaport or border point of exportation. If shipped on consignment without a sale

having been made, the market value at the time of exportation in the ports of the United States from which exported should be stated. (R. S. 337.)

Freight and other charges from the port of departure in the United States to the place of destination in the foreign country or noncontiguous territory to which shipped must not be included in the export value. (Art. 1135, Customs Regulations.)

Value should be stated in whole dollars only, ignoring fractions of less than 50 cents and counting 50 cents and upward as \$1. (Art. 1138, Customs Regulations.)

Description of articles.—The merchandise must be described in specific and not in general terms. Such designations as "fruits," "provisions," "groceries," "canned goods," "hardware," "machinery," or any other general term must not be used, but the articles should be described in sufficient detail to permit of their classification under the proper classes of this schedule, giving total quantity and value of each article, but omitting invoice details as to different marks, sizes, or kinds of the same article.

The number of packages, boxes, barrels, bales, etc., must be specified, with quantities in the unit stated in this schedule, in net weight, exclusive of the weight of barrels, boxes, or other bulky coverings, and of salt or pickle in the case of salted or pickled fish and meats. Tons, where required, should be given in long tons of 2,240 pounds. (Art. 1140, Customs Regulations.)

In stating quantities, fractions of less than one-half will be ignored and fractions of one-half or over stated as whole numbers. (Art. 1138, Customs Regulations.)

Country of destination of exports.—If the country of ultimate destination of the commodities is different from the country for which the vessel or car departs, collectors will require exporters and shippers to state in the export declarations the country to which the commodities are sold or destined for a market.

Special care should be taken to state the final destination of goods shipped through Canada to Europe and of goods to be trans-shipped in the United Kingdom, the Netherlands, Germany, and France to other countries, and through Chile or Peru destined to Bolivia.

Export statistics of agricultural implements and farm equipment are of value to the agricultural implement industry more than to any other group or class, and for that reason it is very strongly urged that the export declaration should in all cases be made out by the manufacturer rather than by the forwarding agent. The forwarding agent has no special interest in export statistics pertaining to agricultural implements, and consequently there is no incentive on his part to use care in making out the export declaration, as it is used for no other purpose than the compilation of export statistics. If all manufacturers of implements who ship goods for export from their factories would turn over to a competent individual the work of preparing the export declaration, the accuracy of the export statistics of agricultural implements would be considerably enhanced.

On following pages articles of farm equipment are arranged alphabetically (p. 5) and also numerically (p. 10), according to the export classes. It is a practical impossibility to compile lists of this nature which are absolutely comprehensive, and for that reason they can not be said to include every article of farm equipment that may possibly enter into export trade. Where an article is not mentioned it is, as a general thing, safe to assume that it falls under one of the miscellaneous classifications, such as "Other dairy machinery and parts," "Other cultivating implements and parts," etc. For the same reason the numerical arrangement which shows the various articles falling under each export classification is not necessarily comprehensive. It is believed, however, that the most important items have been shown, and the use of these lists by exporters and shippers will not only simplify their work in making out the Shipper's Export Declaration in a proper manner, but will aid considerably in the securing of greater accuracy in export statistics.

The basis for the classification in the lists has been the articles handled by the Agricultural Implements Division of the Bureau of Foreign and Domestic Commerce. For this reason it will in some cases be necessary to consult Schedule B (Statistical Classification of Domestic Commodities Exported from the United States) for items which are not listed herein. For example, the listing of internal-combustion engines has been confined to those not exceeding 10 horsepower. A complete listing of engines, however, will be found in Schedule B. This applies also to pumps.

Following there is shown a sample Shipper's Export Declaration, indicating the proper way to make out a declaration for the types of shipments which frequently occur.

It should be noted that the sample tractor shipment which is shown consists of 10 complete tractors, which are shipped in 30 separate boxes or packages. The number 10 is shown in the "Quantity" column, but no number is shown opposite the second item, "Wheels for tractors," as the wheels so indicated are part of the complete tractors. Therefore for the first two items only one number is shown in the quantity column.
